

AIM RPC_NTSV Patient Data Dictionary

The purpose of the AIMRPC Data Dictionary is to develop consistency in data entry. The Data Dictionary refers to all elements on the AIMRPC Data Collection Forms.

Inclusion criteria: all nulliparous, singleton, vertex patients delivering a live fetus at greater than or equal to 37 0/7 weeks gestation.

Patient Data Collection Form for all NTSV patients

- 1) **Chart Number:** Enter a unique identifier based on the system you develop locally. This ID **SHOULD NOT** be the medical record number
- 2) **Date of Delivery:** Enter date infant was delivered as XX/XX/XXXX
- 3) **What was the mode of delivery for the NTSV patient?:**

Vaginal Delivery (could be either spontaneous or operative)

SVD: spontaneous vaginal delivery

Operative Vaginal Delivery: Vaginal birth with the assistance of forceps or vacuum extraction

Primary Cesarean section: first delivery via Cesarean section

- 4) **Was the 5 minute Apgar score 6 or less?:** The Apgar score assigned by the provider and documented at 5 minutes should be used.
- 5) **Was the infant admitted to the SCN/NICU?** Was the infant admitted to the Special Care Nursery or to the Neonatal Intensive Care Unit after birth and within the first 12 hours of life?
- 6) **If the infant was admitted to the SCN/NICU, please indicate the primary reason for admission:** In the infant's EMR, use the primary indication for SCN or NICU admission as noted by the provider.
- 7) **Ethnicity:** The patient's racial/ethnic background – if mixed race, you may choose more than one ethnicity. Patients of Indian or Middle Eastern descent should be listed as "Asian." If the patient's ethnicity is not listed, choose "Other"
- 8) **Payor:** The entity paying for delivery services
