

## Perinatal Quality Collaborative of North Carolina

Provide the facilitation, support and education necessary to deliver optimal care for infants with neonatal abstinence syndrome (NAS) in the hospital and for the first six months of the newborn period. Aim: • Create a multidisciplinary hospital and community-based team focused on providing a standardized approach to the identification, evaluation, treatment, discharge and follow up of the NAS infant. / • Hospitals will standardize the non-pharmacologic and pharmacologic care of the NAS infant using practices based either on Eat Sleep and Console (ESC) or the modified Finnegan scoring system. / • Hospitals will increase partnership with families or guardians in the care of NAS infants. Every infant with NAS will have the opportunity to participate in a Safe Plan of Care. At discharge NAS infants will be referred directly by the hospital based medical team to a community based medical team that will be responsible for ongoing newborn acute and routine care, and support for families or guardians.

Secondary Aim	Primary Drivers	Secondary Drivers
<b>1 Proper Identification</b>	<p>1.1 Each nursery has a protocol that defines indications and procedures for screening for infants at risk for withdrawal</p> <p>1.2 Each nursery develops criteria for toxicology testing and referral of infant to CC4C for a Plan of Safe Care</p>	<p>1.1.1 Identification of eligible infants for toxicology testing</p> <p>1.1.2 Type of toxicology testing</p> <p>1.1.3 Process for communicating results to mother or caregiver</p> <p>1.1.5 Criteria for Referral to Social Work and CC4C</p> <p>1.1.6 Criteria for CPS referral</p> <p>1.2.1 Toxicology testing should be completed on all the following infants:</p> <ul style="list-style-type: none"> <li>• Known maternal history for drug use</li> <li>• Positive maternal drug screen</li> <li>• And the following criteria:                             <ul style="list-style-type: none"> <li>o No/late prenatal care (&lt;4 visits or after 16 weeks)</li> <li>o Symptomatic infants</li> <li>o Unexplained abruption</li> </ul> </li> </ul> <p>1.2.2 A Plan of Safe Care referral to CC4C should be made for infants</p> <ul style="list-style-type: none"> <li>• Affected by Substance Abuse:                             <ol style="list-style-type: none"> <li>1. Positive urine, meconium or cord segment drug screen with confirmatory testing in the context of other clinical concerns as identified by current evaluation and management standards. <i>Or</i></li> <li>2. The infant's mother has had a medical evaluation, including history and physical, or behavioral health assessment indicative of an active substance use disorder, during the pregnancy or at time of birth.</li> </ol> </li> <li>• Affected by Withdrawal Symptoms:                             <ul style="list-style-type: none"> <li>o The infant manifests clinically relevant drug or alcohol withdrawal.</li> </ul> </li> <li>• Affected by Fetal Alcohol Spectrum Disorder(s) (FASD)</li> </ul>
